EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

1. The application has been amended as follows:

Claims 21-48 have been renumbered as claims 1-28, respectively.

2. The following is an examiner's statement of reasons for allowance: prior art does not teach or suggest in combination of the combined limitations of

a method for transmitting an input wave comprising the steps of: generating two or more signals that represent said input wave when combined; modulating a carrier wave with at least one characteristic of at least one of said two or more signals to generate a modulated signal; modulating a phase shifted carrier wave with a characteristic of another of said two or more signals to generate a phase shifted modulated signal; inputting said modulated signal and said phase shifted modulated signal into an amplifier having at least two amplifying segments; controlling at least one of said amplifying segments with a digital control signal containing a characteristic of one of said two or more signals that represent said input wave when combined to generate at least one segment output; controlling at least another of said amplifying segments with another digital control signal containing a characteristic of another of said two or more digital signals that represent said input

wave when combined to generate at least one other segment output; transmitting an output signal based upon said at least one segment output and said at least one other segment output (emphasis added);

an apparatus for electromagnetic processing of an input wave comprising: an amplifier having at least two amplifying segments for receiving a modified signal derived from two or more signals that represent said input wave when combined; and a control circuit for regulating said modified signal across one amplifying segment using a digital signal containing a characteristic of one of said two or more signals, and for regulating said modified signal across another of said amplifying segments using another digital signal containing a characteristic of another of said two or more signals (emphasis added);

an apparatus for transmitting an input wave comprising: a signal generator for generating two or more signals that represent said input wave when combined; a signal modulator for modulating a carrier wave with a characteristic of at least one of said two or more signals to generate a modulated signal and for modulating a phase shifted carrier wave with a characteristic of another of said two or more signals to generate a phase shifted modulated signal; an amplifier having at least one amplifying segment for receiving said modulated signal and at least one other amplifying segment for receiving said phase shifted modulated signal; a controller for controlling said at least one amplifying segment with a digital signal containing a characteristic of one of said two or more signals and for controlling said at least one other amplifying segment with another digital signal containing a characteristic of

another of said two or more signals to generate at least one segment output; and an output circuit for transmitting an output signal based upon said at least one output segment (emphasis added).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
